Dear Hiring Team,

As a former finance professional, transitioning to software engineering was a challenge for my skill set and a serious change of environment. The trading floor is unlike coding, but it taught me meticulous attention to detail; a missed error on a trade order could result in significant financial loss for clients. Furthermore, my ability to handle pressure was solidified working to submit deals within minutes of confirmation. These skills transferred very successfully as I transitioned into software engineering.

Coalition's mission to deliver clients the highest quality work while providing a fun, thriving, and innovative environment excites me, and, combined with my effective communication skills within collaborative team settings, I believe I am an excellent candidate for the position of Front End Developer at Coalition Technologies.

- I built a full-stack clone of the popular restaurant booking website OpenTable. In 10 days I submitted my dynamic clone to production using **Ruby on Rails** for the backend, a **PostgreSQL** database, and **React.js/Redux** for the frontend.
- I used Vanilla **JavaScript** and **Canvas** along with **HTML** and **CSS** styling to create an interactive single-player arcade-style video game.
- I built a full-stack interactive dashboard for soccer stats using a **Python 3 Flask** backend paired with a **React.js** frontend, sourcing data from a **RESTful Web API**.

I have a proven ability to work quickly, efficiently, and collaboratively. I am excited about the innovation that Coalition aims to bring to the industry and am thrilled at the opportunity to join the team. I look forward to hearing from you soon.

Sincerely,

Will Corona
